

Advanced Digital Technology

Internet Security

Your number one business priority

Giving your employees, customers and partners easier access to information and applications puts your business at risk. Your valuable corporate data and business continuity become more vulnerable to attack from hackers and spammers. Even trusted users can cause damage.

How much of your bandwidth is clogged up with spam? In 2007, industry-watcher IDC predicted that spam would soon account for 40 billion of the 97 billion emails sent daily.

Using specialist skills and experience, ADT helps you to:

- Make a rapid start today on safeguarding your business
- Block threats - known and unknown - before they touch your networks
- Improve network performance by filtering out spam and junk email
- Strike the right balance between easy access and tight security
- Comply with spiralling regulation around privacy and data protection

All the products, skills and experience to safeguard your business

MailController email security solution from Opal MailController Anti-spam Protect your business against the junk mail deluge

An effective filter blocks the maximum unwanted email with the minimum of 'false positive' rejections. MailController anti-spam quickly learns what your organisation considers to be spam and adapts accordingly, customising its filters to your specific environment.

It's the most effective and flexible spam filtering technology on the market today - and fast too, with the whole scanning process taking under a second.

Benefits

- Highest detection rates, minimal false positives
- Self-tuning adaptive spam filtering technology
- Maintain control via secure management portal

MailController Anti-virus Complete protection from viruses and malicious content inside Internet email

The MailController scanning engine joins forces with two leading commercial anti-virus technologies to scan for infected email. Inbound and outbound Internet email is re-routed through data centres for scanning. Any detected virus is automatically quarantined to stop it infecting your network.

Restricting your firewall to accept email traffic only from MailController further protects from hackers and spammers.

Benefits

- Retain control and visibility throughout through a secure customer portal
- Integrated protection from three anti-virus technologies working together
- Detects viruses even before new signatures are available

WebController Internet-level web security from Opal

Counter the threat from within

How do you protect against employees misusing or abusing Internet resources, and causing lost productivity, damaging security breaches or inappropriate material entering your corporate IT systems?

WebController provides everything needed to define and enforce all aspects of web security and employee Internet usage policies.

Benefits

- Threats are blocked before they touch your networks
- Powerful reporting and realtime visibility of employee web usage and threat data
- Expert support to ensure defences are constantly updated, with multi-tier protection of all web content

Firebox X Core from WatchGuard

Comprehensive enterprise firewall solution

Firebox X Core solutions provide the most complete security in their class. Comprehensive protection keeps your network safe from malicious attacks. Multiple security layers work together to strengthen overall protection, while communication between layers reduces and fine-tunes the processing. The result is cost-effective protection without sacrificing performance. The built-in proactive defences of the Firebox X Core are constantly at work, keeping your networks safe from known and new threats.

Benefits

- Proactively blocks new threats
- Multiple ADSL connections supported
- Upgradeable capabilities future-proofs your investment

Firebox X Edge from WatchGuard

Firewall solution for small businesses

Small businesses face the same Internet security threats as large corporates. Firebox X Edge provides an affordable solution which is genuinely easy to set up, use and scale up, with solid protection from day one. As business needs grow, you can upgrade to the capacity and security features of a higher model by applying software licence keys. That's it - there's no additional hardware to buy.

In the same way, where you have branch and remote offices, Firebox X Edge extends the robust network security at your central office without placing a resource burden for your IT department.

Benefits for small businesses

- Easy set up and management using an intuitive, web-based user interface
- Comprehensive unified threat management to keep your networks safe
- Secure inter-office connectivity with easy-to-configure branch office VPN

Benefits for branch/remote offices

- Central management of the entire system
- Uniform security policies set and updated for the entire network with a few clicks
- Advanced networking optimises inter-office traffic and bandwidth

Together MailController and WebController provide total Internet and email control. As subscription services, they are quick and easy to deploy, with no hardware or software to purchase.

Why work with ADT?

Advanced Digital Technology (ADT) is a provider of IT solutions for business. Our technical expertise covers everything from hardware management and network support to business management software.

We have over 20 years of experience in the provision IT solutions to local businesses, building a reputation for professional service and partnership in delivering tangible benefits from technology.
