No-hassle, affordable technical services

- PC and server support
- Full operating system support
- Local, reliable service
- Friendly, technical experts
- Flexible support options
- As simple or comprehensive as you need
- Various payment options for easy budgeting
- Concentrate on your business, not your hardware

Easy, flexible options to support your business

Technology is what we do, so why not let our local experts help you to improve how you manage hardware in your business. We offer a simple, hassle-free solution to support your PC and server needs that can be as flexible and as comprehensive as you want it to be.

Let us release you from the maintenance of your hardware and help you to create an effective IT strategy. With ADT you'll get total peace of mind as our technical team has developed a wide range of skills and gleaned invaluable experience. But more importantly, we are local, so you know that our support is never far away.

What's more, we offer our clients flexible solutions for managing the cost of hardware maintenance with monthly, quarterly or annual options.

Alternatively, ADT offers a contract-based service that covers all of our services at a low, regular premium. Clients can benefit from priority response, scheduled maintenance of PC's and server hardware, thereby ensuring that any disruption caused by a hardware malfunction is minimised.

"We have found ADT's guidance and expert support to be excellent and would recommend them to any other company..."

**Geoff Owen, Financial Director,
Railston Design Limited**

Data back-up and testing

Minimise your risk, maximise your efficiency

ADT offers flexible solutions to test and support your data resiliency and data recovery. We recognise that not every company wants or needs a full disaster recovery plan, but most companies should have a robust solution for protecting their data in case of a failure in hardware.

Everyone takes regular backups of their business system, believing that they are safe should disaster strike. Many companies are unaware that frequency is not the only consideration. Quality of backup is just as important as the frequency.

ADT can support you in regular testing of your tape back-up system to ensure that it doesn't let you down when you need it most. We'll ensure that your system data is up and running again in the shortest possible time.

Our service can also offer proactive system monitoring which will check for any irregularities in your data back-up software and alert ADT before it causes a problem to your business. And ADT can test your overall strategy through a full server rebuild test which simulates a system down scenario and the capability of your back-up strategy.

Why work with ADT?

Advanced Digital Technology (ADT) is a provider of IT solutions for business. Our technical expertise covers everything from hardware management and network support to business management software.

We have over 20 years of experience in the provision IT solutions to local businesses, building a reputation for professional service and partnership in delivering tangible benefits from technology. We will ensure that you receive the correct advice geared specifically to your requirements at all stages of your involvement with us.

ADT can also offer a host of business solutions covering integrated accounts, distribution and manufacturing solutions, customer relationship management (CRM) and payroll management and is a fully accredited business partner of Sage UK.

If you are looking for a local business partner to support your business in the optimal use of technology in your business then we urge you to give us a call. We'll be happy to discuss your requirements and offer advice, with no obligation on your part. **Why not give us a try?**
