

What's New in Sage 1000 v2.02

Sage 1000 v2.02 is the latest release of our premier Suite application. Since its launch in early 2006 we have added to the functionality and usability of the software through successive releases. This new version delivers key functionality requested by a number of customers and Business Partners, namely:

1. Telesales functionality

If your business has a telesales operation, the following new modules and related functionality will be invaluable for you:

- Telesales
- Telesales Utilities
- Point Of Sale (including Credit Card validation via a third party application)
- Returns
- Repairs
- Repetitive Route Scheduling (Load Scheduling)
- Telesales Post Code Lookup (via a third party application)

2. A Credit Management module

This new functionality will help your Credit Controller to better manage this key area of your business, whatever industry you work in. It allows you to:

- Define your own account status codes in line with your own business processes
- Store comprehensive credit-specific information about customers
- Generate and process 'to do' lists for each credit controller

3. Improved Resource sharing

Sage 1000 v2.02 offers a more flexible approach to modelling resources shared between companies in the following modules:

- Cash Book
- Nominal Ledger
- Payroll

Please note that some limitations apply in terms of the availability of the Telesales and Credit Management functionality from different parts of the system. Also inter-branch transfers are not supported. Please talk to your Sage Business Partner for further details.
